

## Memo: PureGreen24 Application Best Practices

Due to the low toxicity (EPA toxicity level IV) of PureGreen24 there is NO requirement to rinse PureGreen24 after it is applied. However, to avoid a residual product build up\*\*, it is recommended that two minutes\* after spraying PureGreen24 the surface be wiped dry with a clean dry towel (cloth or paper).

It is NOT recommended that the surface be rinsed or wiped with a wet cloth after the application of PureGreen24 as such a practice could reduce the residual effectiveness of PureGreen24 (PureGreen24 kills Staph up to 24hours after application).

### The Step-by-Step

1. Completely wet the desired hard surface with a mist of PureGreen24
2. Let stand two minutes\*
3. Optionally: wipe with a **Microfiber Cloth**
  - a. Tip: when disinfecting large surfaces such as wrestling mats, wrap a clean towel around a large dry dust mop, spray and wipe

**Microfiber cloths are recommended for the application of PureGreen24. Simply “spray and wipe” surfaces to be disinfected; ensure all surfaces are completely soaked\*, then wipe off excess. For irregularly shaped surfaces like children’s toys, door knobs or bedrails, spray PureGreen24 on the microfiber towel until a portion of the cloth is damp, then wipe the desired surface. The microfiber cloth will clean the surface while you are disinfecting.**

**For porous gym flooring it's recommended that PureGreen24 be sprayed and then wiped with a microfiber cloth to prevent residue buildup.**

\* A 10 minute period is recommended for killing Fungi and Viruses. Within 2 minutes bacteria are killed (including MRSA)

\*\* Surfaces may become tacky or sticky due to the citric acid contained in PureGreen24

## **Memo: Las Mejores Practicas de aplicación del PureGreen24**

Debido a la baja toxicidad (nivel de toxicidad IV del EPA) del PureGreen24, no se requiere enjuagarlo despues de haberlo aplicado. Sinembargo, para evitar una acumulación de un producto residual\*\*, se recomienda que dos minutos\* despues de aplicar el PureGreen24, la superficie sea secada con una toalla limpia (papel o tela).

No se recomienda que la superficie sea enjuagada o limpiada con una toalla mojada despues de la aplicacion del PureGreen24 ya que esa practica podria reducir la efectividad del efecto residual del PureGreen24 (PureGreen24 mata el Estafilococo hasta 24 horas despues de su aplicacion).

### **Etapas a seguir en la aplicacion:**

- 1.) Moje completamente la superficie dura deseada con PureGreen24
- 2.) Mantega la superficie sin tocarla pr 2 minutos\*
- 3.) Opcionalmente: limpie con una toalla LIMPIA y seca
  - a.) Sugerencia: cuando se desea desinfectar superficies grandes como esteras de lucha, envuelva una toalla limpia alrededor de un trapero grande y seco y seque a continuacion

\* Un periodo de 10 minutos se recomienda para matar Hongo y Viruses. La bacteria muere en 2 minutos (incluyendo MRSA)

\*\* Las superficies pueden llegar a ser horteras o pegajosas debido al acido citrico contenido en el PureGreen24
