

## **IMPORTANT SAFETY NOTICE**

### **IMMEDIATE ACTION REQUIRED**

The overall safety of end users is a direct result of the partnership between a manufacturer of exercise equipment and the facility that purchases its exercise equipment. The key to this partnership is the invaluable feedback that fitness professionals provide to exercise equipment manufacturers which allow for product improvements and the two way communication of possible hazards.

In the interest of promoting the continued and safe operation of its machines and the safety of end users, Cybex wants to remind you and your facility that **all** strength exercise machines should be anchored to a level floor to ensure user safety as stated in the strength equipment owner's manual.

To minimize future risk, immediately do the following:

- Do not allow users to misuse the strength exercise equipment in any way. Cybex strength equipment should only be used with Cybex designed components or accessories and used as instructed by Cybex in its manual and instructional placards attached to the equipment.
- And, as requested in the instructions that accompanied any Cybex product, be sure that the strength equipment or any Cybex strength machine has been properly anchored to a level floor. If it is not, see the Cybex instruction manual for detailed information on how to anchor Cybex strength fitness equipment to the floor. This information includes:
  - 1) Type of fastener
  - 2) Strength of the fastener
  - 3) Specification for a level floor
  - 4) Pull out strength of the fastener
  - 5) The manual also states a local professional contractor should assist you on how best to anchor the machine to the varying types of flooring surfaces a facility may have, the type of equipment required to anchor the machine to a facility's floor, or the building code requirements your facility must meet because of its location.

Cybex seeks to improve the safety and function of our products and welcomes continued customer feedback. Please let me know if you have any questions, comments or concerns.

Regards,

Pete Sturmfels  
Director of Quality and Product Compliance  
Cybex International
