Volume 10

December 2010

Jungle Gym Configuration Update

Beginning with January 3rd production the Jungle Gym will be configured as a “square” product. That is all four sides of the Quad Tower will have the same width. This allows for complete interchangeability of stations and will no longer have the limitation of placing light and heavy stations.

All stations will now use a mix of 10 and 15 lb plates. The former “heavy” stations now have revised product numbers to reflect their updated configurations.

New Product Number	Replaces	
17001	17000	Quad Tower Previously 17000
17031	17030	Row
17041	17040	Dual Handle Row
17071	17070	Lat Pull
17081	17080	Dual Handle Lat Pull

In the new configuration, the Lat Pulls and Low Rows now have 255 lbs. (116 kg) weight stacks.

All stations will come with standard increment weights.

With the new configuration, only the previous 17007 Blank Panel is used when filling a blank position. Please also recall that when using blank panels two rules still apply:

1. *If a tandem is to be created, the stations must be directly across from each other and not adjacent. This will require the use of two Blank Panels.*
2. *Under **no** circumstance can three blank panels be used to create a “free standing” “single station” unit.*
