#### ABOUT THE CERTIFICATION PROGRAM:

The Fitlinxx Equipment Certification Program is a joint effort from Fitlinxx and Fitlinxx Equipment Partners to provide a tested, unified solution to our joint customers. This testing program allows our customers to better realize their investment in Fitlinxx and products from our partners.

The Fitlinxx Equipment Certification Program comprises a detailed design and field-verification process, including detailed on-site installation testing and review in order to certify each piece of equipment successfully integrates with the Fitlinxx system. Equipment certification is made on each specific product model number and hardware release. To ensure our customers that products maintain compatibility with the Fitlinxx Network, Fitlinxx Equipment Partners are required to re-certify any products that they upgrade or modify.

## Eagle | NX Fitlinxx Certification

The first twelve Eagle NX machines have been certified by Fitlinxx and we will be continuing the certification process with the balance of the line.

Please note that the line is "Certified," however we will not be predrilling at the factory.
